KEY BENEFITS

Intuitive historical data playback

Market Replay, Time Machine and order book reconstruction tools across different markets and asset classes

Live Alerts

Be the first to know what's happening in your markets

Powerful historical data analysis

Back-testing of trading models and strategies, tick-level historical charting, data analysis and investor education

Sophisticated pricing engine

Arbitrage-free theoretical option prices calculation based on real-time or historical data

Zero footprint

No need to deploy any infrastructure to support this service

Customizable interface

Supports multi-monitor display of market information with custom widgets layout

INTEGRATION

Easy 3rd party integration

Integration with trading venues and banking software

Data export

Quick and easy data export to various formats

Powerful set of APIs

Easy to integrate with a set of APIs (Java, C/C#, JavaScript, REST) which require very low effort to build fully functional market data interfaces

Supports any market data vendor

Can be used in conjunction with the dxFeed data services or integrated with a client's enterprise data infrastructure
