- **Historical and real-time feeds**

Implement your own methodologies

OVERVIEW

dxFeed Radar is a comprehensive technical and fundamental market analysis solution ready for integration with your infrastructure to provide an added value to traders and investors.

WHITE-LABEL UI

dxFeed Radar may be provided as a web-based application with predefined and custom search criteria.

KEY FEATURES

Alerting services

Easy integration
with applications

2-in-1 scanner
and screener

Wide range of
configuration options

Powerful proprietary
scripting language

Unbeatable
coverage

2-IN-1 SCANNER AND SCREENER SERVICE

It is a SaaS that allows your clients to easily perform different analyzing tasks.

- As a MARKET SCREENER, it can track live market behavior.
- As a MARKET SCANNER, it can search for new trading ideas — finding the right investment instruments and narrowing the list of thousands of instruments to a handful of the best trading assets.

A POWERFUL INSTRUMENT FOR TRADERS

Custom search
Traders can build their own custom indicators directly in the web application using the flexible scripting language

Presets
Built-in presets aimed at main trends are available

Alerting service
Clients get real-time trading alerts

Overview of the instrument
Main fundamental and technical data is available for each instrument
