RussellTick Indices
Asian Indices
S&P Indices
dxFeed indicators

Mutual Funds:

Nasdaq MFDS

FX:

Indicative FX B/A feed (20+ contributors, 1500+ pairs)

Treasuries:

Nasdaq Fixed Income

1.2. Data availability for charts server requests via API

List of all available aggregation types:

- Time charts
- Tick charts (single-tick level or any number of ticks)
- Price charts
- Price level charts
- Volume charts
- Renko charts

Depth available by default (both limits listed in the table apply to data sets, counting backwards from the current time):

Aggregations	Depth available (calendar days)	Maximum number of candles at a time
1 tick	5 days	1000
2+ ticks	5 days	8000
1+ seconds	5 days	8000
1 – 4 minutes	43 days	8000
5+ minutes	90 days	8000
1+ hour	285 days	8000
Days, weeks, months	All available period	8000
Price	5 days	8000
Price level	5 days	8000
Volume	5 days	8000
Renko	90 days	8000

Please note that the limits listed above apply to all requests and are counted backwards from the current time. **fromTime, toTime** filter returns a result that is limited by maximum number of candles and maximum

available period calculated from the current time. E.g., if you request 3-tick candles for the day before yesterday, and data for today and yesterday already reached 7000 3-tick candles, you will get only 1000 candles as your result.

Please contact dxfeed-sales@devexperts.com to learn about custom depth availability.
